#### **About Nykode Therapeutics**

Nykode Therapeutics is a clinical-stage biopharmaceutical company dedicated to the discovery and development of novel immunotherapies with a focus on the treatment of cancer and autoimmune diseases. Nykode's modular vaccine technology specifically targets antigens to antigen presenting cells (APC), employed with their cancer vaccines to induce a broad, strong and long-lasting antigen specific immune response, which correlates with clinical responses in cancer patients.

Nykode's lead product candidates are VB10.16, a therapeutic vaccine for the treatment of HPV16 induced malignancies, which demonstrated favorable safety and efficacy results from its Phase 2 trial for the treatment of cervical cancer. VB10.NEO, an individualized cancer neoantigen vaccine, is being investigated in a trial with more than 10 different indications.

The Company's partnerships include a multi-target collaboration with Regeneron in oncology and infectious diseases.

Nykode is also utilizing its APC-targeted technology to create an inverse vaccine platform for the potential use in autoimmune disorders, organ transplant rejections, anti-drug antibody reactions and allergy.

Nykode Therapeutics' shares are traded on the Oslo Stock Exchange (OSE: NYKD). Further information about Nykode Therapeutics can be found at <http://www.nykode.com>.
